Module 3

Introduction to AngularJS

INTRODUCTION TO ANGULARJS

- AngularJS is a JavaScript framework
- Developed and maintained by Google
- Used to create dynamic and interactive web applications
- Works mainly on the client side

WHY DO WE NEED ANGULARJS?

- Page reloads again and again
- Too much manual JavaScript code
- Difficult to manage large applications
- Poor user experience

WHAT ANGULARJS PROVIDES

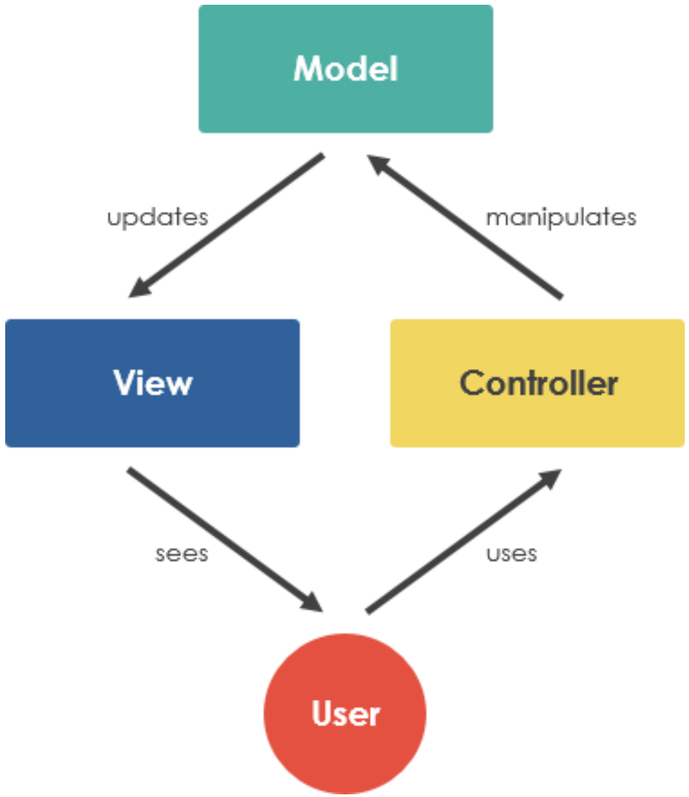
Key Features

- Two-Way Data Binding
- MVC Architecture
- Directives
- Expressions
- Single Page Application (SPA)
- Dependency Injection

ANGULARJS ARCHITECTURE (MVC)

MVC stands for:

- Model
- View
- Controller



MODEL (MVC)

Model

- Represents application data
- Handles business logic
- Interacts with database

VIEW (MVC)

View

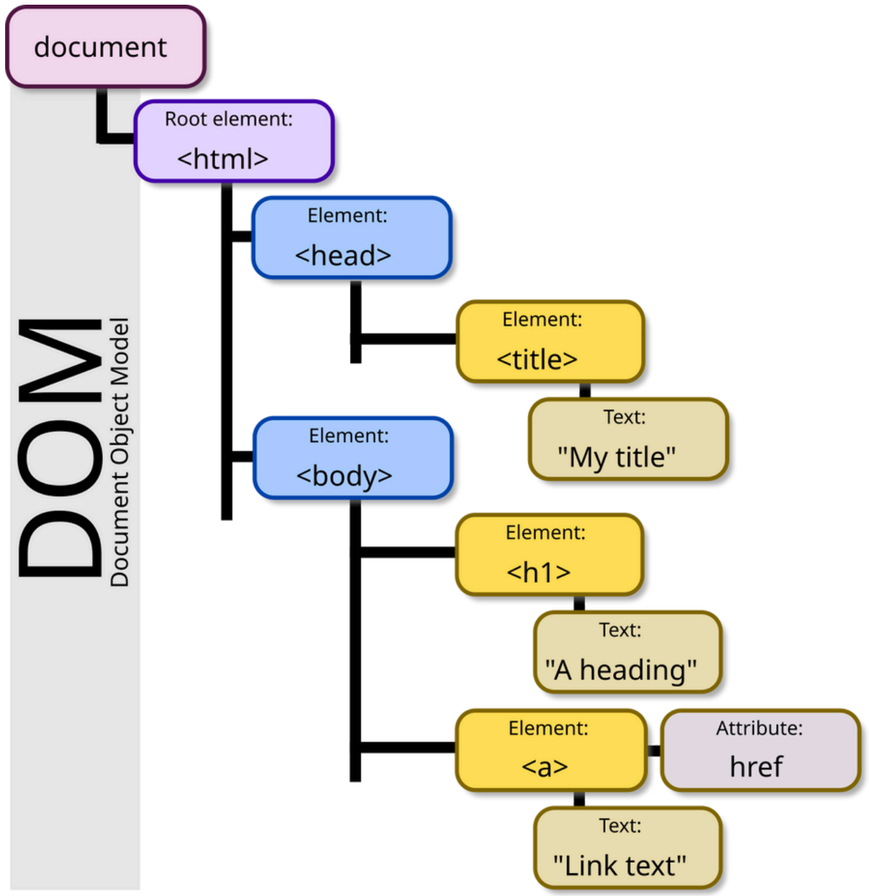
- User Interface (UI)
- Written in HTML
- What user sees on browser

CONTROLLER (MVC)

Controller

- Connects Model and View
- Handles user input
- Updates data and UI

DOCUMENT OBJECT MODEL (DOM)

What is DOM?


- DOM is a tree structure of HTML elements
- Browser converts HTML into DOM
- JavaScript and AngularJS work on DOM
