MULTIMEDIA

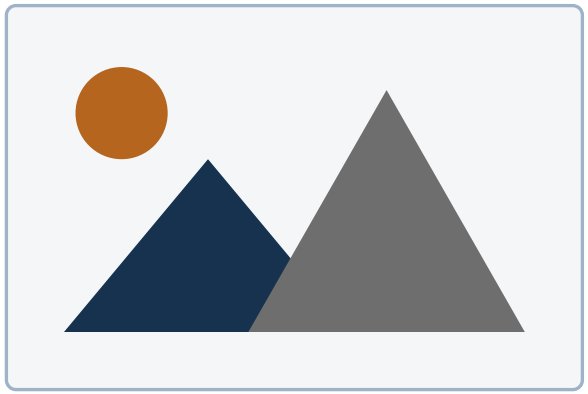

&

TEXT OPERATIONS: DOCUMENT PREPROCESSING

Finishing Text and Multimedia Properties

Formats

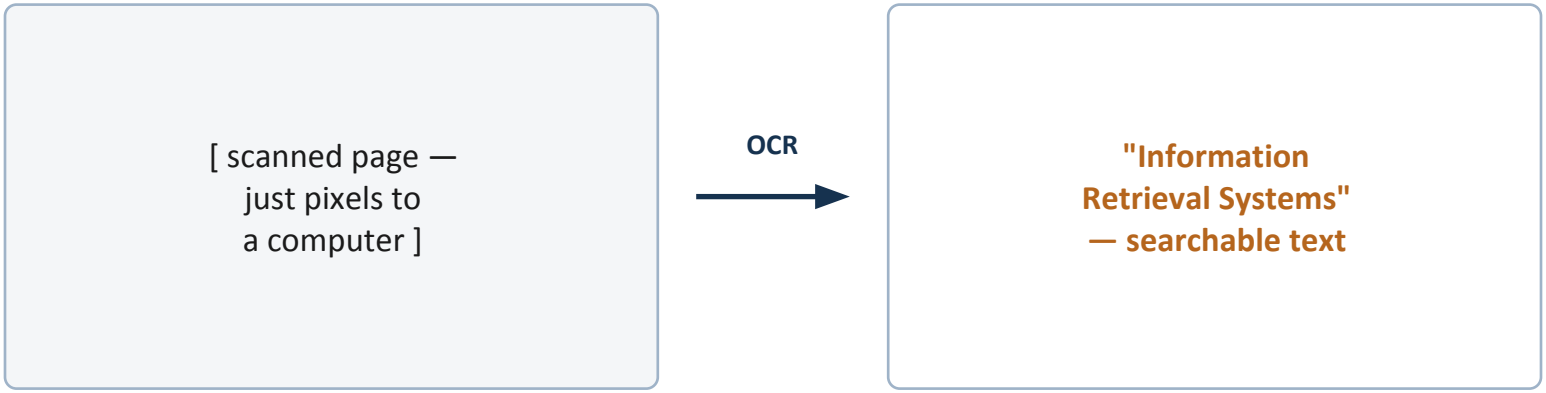

raster — a grid of pixels
(.jpg, .png)

vector — mathematical shapes
(.svg, .ai)

Zoom into a raster photo and it blurs; zoom into a vector logo and it stays perfectly sharp.

Textual Images

A scanned page is just a photograph until OCR (optical character recognition) extracts the actual words from it.

Graphics and Virtual Reality

CAD drawing / 3D model

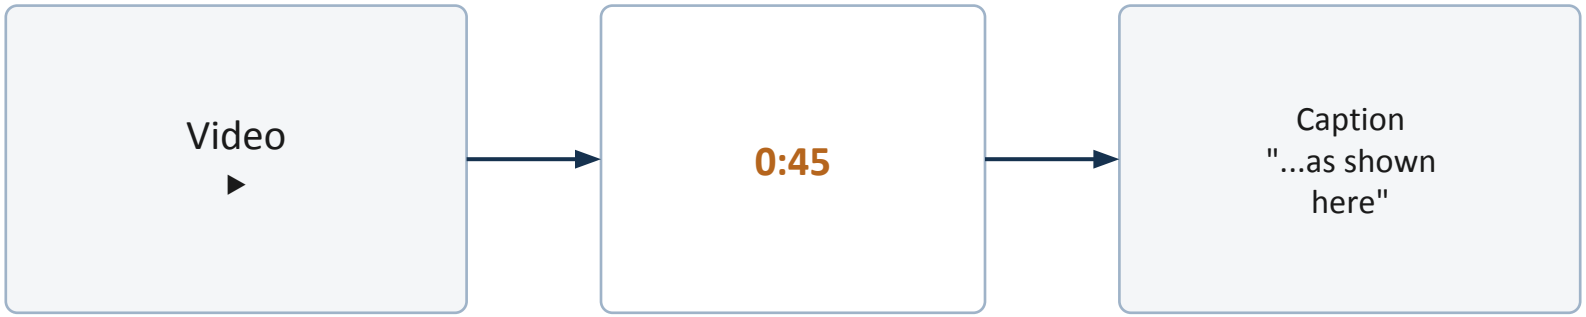

(precise, scalable geometry)

VRML

Virtual Reality Modeling Language — describes navigable 3D scenes

Real life: an IKEA 3D room planner, a VR headset environment, or a Google Earth 3D building are all this same idea.

HyTime

Hypermedia/Time-based Structuring Language — an SGML-based standard for linking and synchronising multimedia across time, not just across pages.

Real life: YouTube's synced captions, or karaoke lyrics highlighting in time with the music, are both HyTime's exact idea.
